

ARL Laboratory Science Review Stakeholder Session Questionnaire

NOAA organizes Laboratory science reviews periodically to evaluate the quality, performance and relevance of its science, and to help inform Lab directions.

We thank you in advance for your input about ARL. The stakeholder session on May 4, 2011 is closed to everyone aside from the external review team, and is an opportunity for you to share candidly with them. Your input will help us to gauge the effectiveness of ARL's collaborative research, products, and services. In preparation for this session we ask you to answer the following questions:

1. Provide a short paragraph that summarizes you and your organization, and the connections you have with ARL.
2. Please list or describe your collaborative research with ARL and/or the ARL products and services you use, that you find to be significant or for any reason would like to make the reviewers to be aware of. How do they contribute to the mission of your organization?
3. Summarize why, in your opinion, these are important. Is ARL making a difference? What is the potential to impact stakeholders; to affect public policy; or to impact public opinion, safety, or livelihoods?
4. What is your assessment of the quality of ARL's work? Are appropriate approaches in place to ensure that high quality work will be performed in the future?
5. What is your assessment of the effectiveness with which the laboratory plans and conducts its work, including the transition of research and development products to operations/applications?
6. What new products would be useful in your opinion? How can ARL improve upon the effectiveness of its research collaborations, products and services?
