Genesis of Lab

- 1948: Special Projects Section of U.S. Weather Bureau
- Provide meteorological expertise to other Federal agencies
- Atmospheric factors were very important to emerging issues of the 1940s, 1950s, and 1960s
  - Cold War & Nuclear Arms Race
    - Weapons Testing
      - Safety
      - Detection
  - Nuclear energy: safety
  - Air pollution
  - Climate change

[Graphs showing atmospheric CO₂ concentrations and temperature changes over time]
Science Themes
Atmospheric Dispersion and Boundary Layer

- **Goals**
  - Improve dispersion predictions and understanding of those predictions through dispersion research, models, and tools
  - Improve measurement and prediction of the boundary layer and the underlying land-surface

- **Major Activities**
  - Boundary-layer characterization and prediction
  - Dispersion modeling
  - Decision support tools
  - Model evaluation
  - Renewable energy
  - Support for DOE, NASA, DOD, DHS, WMO
Air Quality

- **Goals**
  - Improve NOAA’s operational air quality predictions
  - Improve understanding of ecosystem-relevant air pollution, including mercury and nutrients

- **Major Activities**
  - Air quality forecast system R&D
  - Monitoring and process studies
  - Assessment of mercury and nutrient fluxes to/from ecosystems
Climate

• Goals
  • Improve the understanding and prediction of climate variability and change

• Major Activities
  • Reference observations
  • Atmosphere-land surface interactions
  • Climate variability and change analysis
  • Assessment of regional climate impacts
Integration Among Themes

Dispersion / Boundary Layer

Air Quality
- Modeling for toxics, ash, smoke, dust
- Flows around sound barriers

Climate
- Air-land fluxes
- Climatology of the boundary layer
- Urban climate

Climate-air quality modeling
- Co-location of observing sites
Locations, Staff, and Funding
Lab Organization

- Four primary locations
  1. Headquarters
     - Atmos. dispersion, air quality, climate
  2. Atmospheric Turbulence & Diffusion Division
     - Atmos. Dispersion, boundary layer, air quality, climate
     - Support for Dept. of Energy (DOE)
  3. Field Research Division
     - Atmos. dispersion, boundary layer
     - Substantial support for DOE
  4. Special Operations & Research Division
     - Atmos. dispersion, boundary layer
     - Substantial support for DOE
- Staff at two additional locations
  5. NOAA Chesapeake Bay Office
  6. Canaan Valley Institute
- Two Former Locations Transferred in Last 6 Years
  i. Surface Radiation Research Branch (SRRB) (transferred Fiscal Year [FY] 2006)
  ii. Atmospheric Sciences Modeling Division (ASMD) (transferred FY 2008)
Staff Profile
(For locations still in Lab)
Funding Profile
(For locations still in Lab)

**FY 08 OAR Managed Earmarks**

- **Earmark**
- **Retention**
- **Earmark**
- **Other Agency**
- **Other NOAA**
- **Base**
Highlights of Quality, Relevance, and Performance
Quality: Number of Peer-Reviewed Publications
(2001-2010, for locations still in lab)

- Peer-Reviewed Papers
- Papers per Scientist
Quality: Top 11 Active Scientists by # of Pubs  
(Based on Web of Science, covering 1991-2010)

Quality: Selected Awards 2000-2011
(For locations still in Lab)

• International
  • 2007: Nobel Peace Prize for IPCC work (4 scientists)
  • WMO Norbert Gerbier-Mumm International Award
    • 2004: “Stratospheric temperature trends: observations and model simulations”
    • 2003: “Environmental controls over carbon dioxide and water vapor exchange of terrestrial vegetation”
  • Chinese Academy of Sciences Outstanding Paper Award (2003)

• National
  • 2003: Presidential Rank Award for Meritorious Senior Professionals for “outstanding scientific leadership and direction of the laboratory”

• Department of Commerce
  • Gold Medals
    • 2009: HYSPLIT development
    • 2007: “…showing that global average atmospheric warming is similar to surface warming”
    • 2003: “…for the study of airborne geosciences worldwide.”
    • 2000: Significantly improving measurements and predictions of air-surface exchange
Quality: Selected Customers

- Customers
  - NOAA
    - National Weather Service: air quality forecasting system development
    - Natl. Climatic Data Center: climate monitoring network design and implementation
  - Other Federal
    - Dept. of Energy: specialized dispersion and meteorological services, renewable energy field study
    - Dept. of Defense: dispersion tools and expertise
    - Dept. of Homeland Security: dispersion tools
    - NASA: specialized dispersion assessment
    - U.S. EPA: air quality measurements and analysis, roadway tracer study, particulate matter assessments
    - National Park Service: monitoring network leadership
  - Other
    - Texas Commission on Environmental Quality: air quality modeling and analysis
Relevance: Selected Societal Topics

- Dispersion and Boundary Layer
  - Dispersion predictions and related tools
  - Predictions for the wind energy industry
- Air Quality
  - Predictions of ozone and fine particulate matter
  - Ecologically significant pollutants: mercury and nitrogen
- Climate
  - Reference observations
  - Analysis of climate variability and change
Relevance: Contributions to NOAA Priorities

- **NOAA Strategic Plan**
  - Climate: Improved understanding & assessments
  - Weather: high-impact events, improved transportation efficiency and safety, healthy people, more productive and efficient economy (e.g., renewable energy)
  - Coasts: Improved water quality

- **NOAA Research Plan 2008-2012**
  - Dispersion
    - Improve plume prediction capability
  - Climate
    - Integrated observations, analysis, and data stewardship
    - Information on forcings and feedbacks
    - Improve climate predictive capability
  - Air Quality
    - Improve predictions
    - Reduce uncertainties in assessments
Performance: Dispersion & Boundary Layer
Performance: Air Quality

[Photos of air quality monitoring equipment]
Performance: Climate

[Graph showing trends in climate metrics such as ozone, outgoing longwave radiation, Hadley circulation, jet-stream separation, and tropopause.]

[Map of CONUS USCRN Stations with red dots indicating station locations, labeled "August 15, 2008." ]
Last Review and Response:
ARL Core Capability Analysis—
A Strategic Review (2005)
Overview

- That review did not have the same charge as the current series of OAR lab reviews; a primary motivation was high percentage of reimbursable funding and a concern about alignment with NOAA priorities

- Charge:
  Conduct an in-depth assessment of research within the Air Resources Laboratory and, where appropriate, identify changes that would serve to more closely align these activities with the mission of [NOAA] and improve the overall effectiveness and efficiency of NOAA’s research enterprise...

- Four major recommendations
Recommendations 1-3

- ARL has made significant progress in addressing recommendations 1-3 (emphasis added)
  - “ARL should focus on fewer research areas, selecting those where it has demonstrated exceptional competence and sufficient resources to make a significant impact on the science....”
  - “ARL should realign its strategic planning and annual implementation processes to ensure that its limited resources are focused on achieving scientific goals in these critical areas....”
  - “OAR should request an exception from reimbursable funding guidelines for ARL for the work by ASMD and should more fully integrate this group and its research with the rest of ARL, OAR, and NOAA’s program structure....”

- Significant progress made on recommendations 1 and 2
- Recommendation 3 focused on ASMD
- Ongoing actions described later
Recommendation 4: Transfer Applications at Western Divisions

“OAR should find a more appropriate home for the observational support and analysis activities currently conducted by ARL divisions in Idaho Falls, ID and Las Vegas, NV....”

Actions

- With concurrence of OAR management, working to more closely integrate R&D activities with observational support and analysis
  - Find opportunities to pursue both DOE and NOAA priorities
  - Integrate observational support and analysis more closely with R&D activities
Science Planning and Evolution
Planning Process:
Communicate, Assess, Prioritize

- Customers
- ARL Staff
- ARL Mgmt.
- Community
- Higher-Level Mgmt.

ARL...
Priorities
Plans (Indiv. & Org.)
Proposals
Activities
Termination of activities
Planning Process:
Example: Redirect resources from filter pack measurements of dry deposition of S, N to mercury measurements

Customer and community input were considered at all levels.
Planning Process:
Example: Understand low-level winds and improve predictions for renewable energy applications

Customer and community input were considered at all levels.
Planning Process:
Example: Investigate climatology of the boundary layer

Customer and community input were considered at all levels.
Planning Process:
Example: NWS-funded work on air quality forecast system
A Lab in Transition

- ARL not where we want it to be
- Several lab-wide transitions in progress
- Slow—changing expertise, technologies, processes

Motivations
- Improve value to NOAA and other customers
- Improve critical mass
- Respond to/anticipate evolving societal needs
- Respond to recommendations from last review
Transition: Greater Integration with NOAA Priorities and Activities

- Continue evolution from original ARL mission of serving other agencies

Accomplishments:
- Greater involvement in NOAA planning
- Increased coordination with other NOAA dispersion groups
- Cooperation with ESRL on renewable energy
- Increased participation in regional air quality assessments

Ongoing Challenges
- Consideration of small or new activities in NOAA planning—dispersion, climate analysis, regional climate modeling
Transition: Establish Boundary Layer as Another Focus Area

ARL Dispersion

ARL Air Quality

ARL Climate

Boundary Layer Applications

Areas of overlap are notional
Transition: Establish Boundary Layer as Another Focus Area

Areas of overlap are notional
Transition: Establish Boundary Layer as Another Focus Area

- Addresses multiple imperatives: improve alignment with NOAA, growing societal interest/need, opportunities to leverage ARL expertise
- AA and DAA have supported concept—natural area for ARL
- Potential disadvantages: broadens ARL scope, potential overlap with other NOAA efforts
  - Mitigating by focusing on areas that are closely linked with existing work and expertise and coordinating with other NOAA groups
- Established target topics, most new work in planning stage
Transition: Greater Integration Among Divisions

- Historically, each division focused on its own customers and funding
- Want to strengthen connections among divisions without weakening connections with customers
- Accomplishments:
  - Increased technical collaborations
  - More frequent communication among divisions on science issues
- Challenges: further opportunities to integrate scientific and technical activities
Transition: Integration of Research and Technical Services

- Enhance value to NOAA and other customers by better integrating specialized services for DOE with Lab’s R&D

Accomplishments:
- Agreements with DOE now recognize research role of ARL
- HYSPLIT being prepared for use to support Idaho National Laboratory (already used at Nevada National Security Site)
- Feedback/support from those divisions improved HYSPLIT
- Idaho site supported multiple field studies

Future opportunities: renewable energy, arid boundary layer, more work on data analysis/utilization at SORD, UASs
Major Ongoing Challenges for ARL

- Continuing to implement transitions
- Maintaining and improving the quality and value of R&D in current fiscal environment
- Increasing investments in key areas for the Nation and NOAA
  - Dispersion—integrated, enhanced NOAA capabilities
  - Boundary layer—wind energy, initiation of convection, etc.
  - Climate—analysis, air-land interactions, regional modeling
  - Nutrients
- NOAA Climate Service—ensuring that ARL climate-relevant activities are appropriately integrated
